PENARANDA OFF - CAMPUS

NEUST-POC OFFICE OF RESEARCH AND EXTENSION

Application to Conduct Student Research

Date: March 12, 2024

MRS. RECHEL B. MANANQUIL, LPT
Research and Extension Coordinator
NEUST Penaranda-Off Campus

Dear Madam:

This is to seek the kind permission of your office to allow the undersigned students of BSBA Marketing Management - 3A to conduct a research study with the title written below. The title and scope of the proposed research study was deliberated, discussed, and approved as to concept by the undersigned and their chosen adviser whose signature is hereto affixed.

Title of Proposed Study:

The Possible Effects of Expanding A Public Market On The Tenants In Penaranda Nueva Ecija.

Names of Student Researchers:

Simeon, Trixy Ann J., Alfonso, Crystal Jean E.

Very truly yours,

Simeon, Trixy Ann J.

Alfonso, Crystal Jean E.

Name of Students

Endorsed by:

MANUELITO T. SANTIAGO, CPA, CLSSYB
Marketing Research Adviser

Approved by:

MRS. RECHEL B. MANANQUIL, LPT
RET Chair, NEUST POC

CHAPTER 1

INTRODUCTION

According to Morales (2009), Public markets were once essential parts of the cityscape, and they are becoming so again. Markets serve several purposes, social, political, and economic, and so planners interested in multipurpose tools for development will be interested in public markets. Markets can help achieve a variety of goals including place-making, employment, and entrepreneurship.

According to Zaretsky (2024). The Public Market is a very important establishment in the community. Throughout the world, there are a lot of public markets where large commodities are being sold and marketed. Public markets exist to fulfill a public purpose, showcase a community's unique character and culture while serving its everyday shopping needs. A Public Market is a year-round, carefully crafted, intentional and diverse medley of owner-operated shops, stalls and/or “daytables”. Public Markets exist to fulfil a public purpose, showcase a community’s unique character and culture while serving its everyday shopping needs. They typically focus on the sale of a full array of fresh, healthy, value added, and prepared foods – often locally grown or produced. They are sometimes rounded out by crafts and/or a variety of needed neighbourhood businesses. They usually include a seasonal, outdoor farmers market component. Public Markets prohibit chain stores and franchises. They focus on businesses that are locally owned and operated which highlight the best of local foods, crafts, music, heritage and culture. Typically, Public Markets are owned and operated by public or non-profit entities. They exist for multiple public purposes, such as a job creation, small business incubator, tourist attraction, access to fresh, healthful foods, increasing surrounding property values, historic preservation, etc. Public Markets are powerful economic engines. They create entrepreneurial opportunities for citizens and immigrants who often find it difficult to enter the mainstream economy.

According to Icamina (2022) the public market is an indispensable fixture in every Filipino community. There is at least one in each municipality. It continues to thrive despite the rise of shopping malls, supermarkets, mini groceries, and even food deliveries. In remote towns and villages, people depend on public markets for their home consumption needs, and as a place for socialising and getting local news. But a public market can serve a larger purpose. With the presence of a number of key elements, some of which can be set up with doable actions or just involve redesign, a public market can be a showcase of the best and unique in a community, attracting visitors and creating additional source of tourist revenue, spurring new local livelihoods and benefiting the whole community. This is, as they say, a “low-hanging fruit” for expanding and enriching a local economy cost-effectively. The public market can be part of the tourism circuit to draw more tourists and make them spend more time within the enhanced circuit.

According to (Garcia, 2019) The public market turned into a destination market can be one of these places. But if more attractions are needed for boosting visitor volume, nearby potential tourist spots, such as historical shrines, public parks, walkways, settlements, and natural landmarks, need to be redeveloped and incorporated into the circuit. Public Markets are considered the heart and soul of the community. It sustains the community with its everyday needs as it offers a wide range of goods and local products. It also provides opportunities for the low-income group to sell products at an affordable cost which encourages the people to buy and patronize. It creates social interaction among the people that builds a sense of community as it enhances the economic development of the municipality or city. Public markets have become the landmark for the community to gather and the identity of a place, also public markets in the Philippines are gradually deteriorating. It plays a vital yet neglected role in the community. The once source of food and vegetables of the community is slowly declining because of rapid urbanization, modernity and improper waste management. The decline of consumers in the market resumes the inability to maintain the facilities leading to its decay - physically, culturally and economically. Nowadays, public

markets are left behind because of the rise of existing malls and supermarkets as the consumers search for convenience and comfort. The mercantile image of Public Markets today as a center of exchange of culture and trade has deteriorated and causes market sustainability loss with respect to its functional relevance and its economic stability. Moreover, public markets are looked down by some people as unsanitary places with congested space. The physical deterioration of the public markets is due to its stagnant development, improper management and lack of maintenance. While other commercial buildings have undergone drastic changes with style, function and architectural innovations, public markets have not kept up with the latest advancements. Making our country filled with markets that are not energy efficient, non-eco-friendly and unhealthy buildings.

According to Carmen (2024). Public Markets are labor intensive. They have been shown to be one of the most effective projects ever, at turning one-time capital support into permanent, decent-paying jobs. Most Public Markets create hundreds of new jobs. Many Public Market employees go on to become future Market business owners. Public Market employees tend to be paid much higher wages and have greater longevity in their jobs than typical retail employees. Public Markets typically create scores of entrepreneurial opportunities. Many of these will be opportunities for vendors and families that are often shut out of the mainstream economy – particularly women and minorities. Public Markets generate a sense of community ownership, pride and participation, by creating a “common ground” where different ages, classes, genders, races, and ethnicity, come together in a fun, secure, and vital environment. Ethnic foods and festivals, varied music, a cornucopia of fresh food products, and a colorful, lively environment, cause citizens to mix-it-up in a way that is fun, while encouraging them to loosen up their purse strings. In doing so, they help revitalize local economies. Public Markets provide fresh, affordable, healthful foods, often including an array of organic foods, to local citizens. Public Markets intentionally appeal to customers of diverse economic circumstances. Public Markets have a proven history of significantly

increasing the value of nearby real estate and making it more attractive for privately financed additional retail and housing development. These are all benefits that may come with the creation of a properly planned Public Market. Not all of these benefits may be possible or of equal value to a community. Part of the challenge and the “art” of developing or redeveloping a Public Market is to understand the relative possibility, priority, and importance of these and other goals. One of the first steps in developing a new Public Market is to establish a clear Mission and Goals. This will allow the developer of a Market to home in on what’s most important and what’s possible.

STATEMENT OF THE PROBLEM

1.What is the demographic profile of the selected respondent?

- Name
- Age
- Gender
- Status
- Income
- Religions
- Educational level

2. How many vendors regularly operate in the market of Peñaranda Nueva Ecija?

3. What are the market's current operating hours and days?

4. What are the strengths and weaknesses of the current market?

5. How would it benefit the community of the expanded market?

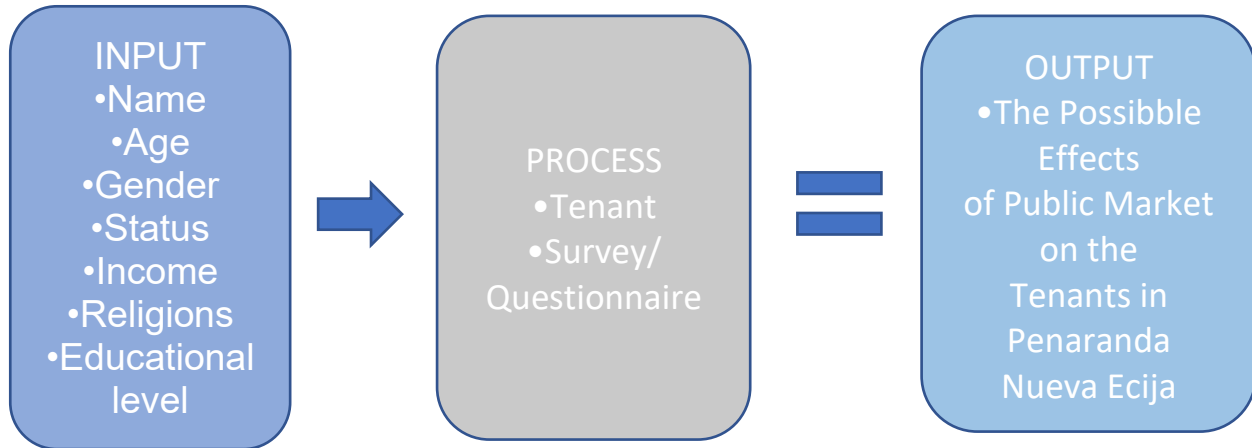

6. What are the challenges you face as a vendor/customer in the current market?

7. What kind of products or services are currently offered in the market?

NULL HYPOTHESIS

There is no significant effect of expanding the public market on the tenants in Peñaranda Nueva Ecija.

CONCEPTUAL FRAMEWORK

THEORETICAL FRAMEWORK

According to Walter Cannon, a renowned physiologist, humans have two pre-programmed responses to stress: fight or flight. Cannon's extensive research of people in stressful situations revealed two distinct patterns in how people choose to deal with stress. Some of the people he studied "fled" from stress, doing their best to avoid it in hopes of it going away, while others chose to "fight" the problem- seeking out and trying solutions to face and overcome stress. Much like the people that Cannon studied, entrepreneurs and small business owners face daily stress, probably even more so than the average working person. In a small company or startup, a lot is at stake, and there is much to lose. Reputation, money, trust, confidence – these are all things that entrepreneurs value, but all are constantly at risk when running a startup or small business. So, when stressful situations come up, such as a website completely crashing, a major customer or key employee leaving, or not having enough capital, entrepreneurs and small business owners are faced with the same dilemma: fight or flight. To succeed, entrepreneurs must reframe their thinking with an optimistic

attitude. Once you believe that you can tackle and solve a problem, you are better equipped to attack the problem and to solve it. Fight. Fight for your business, your mission, and your brand.

SCOPE OF THE STUDY

This study aims to determine the effects of expanding a public market on the tenants in Peñaranda Nueva Ecija. The study will be based on a hard copy questionnaire. The study will use Purposive Sampling. After that the data will be collected on the designated respondents.

LIMITATION OF THE STUDY

This study focuses on determining the effects of expanding a public market on the tenants in Peñaranda Nueva Ecija. The respondents were limited to this specific group of tenants, and the data will be collected through a survey questionnaire

DEFINITION OF TERMS

- **Expansion** - extension of existing location in community.
- **Tenant** - a person that rents in a space or land of the real owner.
- **Public market** - place that sells a variety of products.
- **Loyal customer** - is the consumer that supports a business.
- **Wet Market** - A type of public market where fresh produce, meats, and seafood are sold.
- **Dry Market** - where non-perishable goods such as clothing, household items, and electronics are sold.
- **Stall** - A space within a public market where vendors sell their goods or services.
- **Vendor** - A person or business that sells goods or services within a public market.
- **Customers** - individuals who purchase goods from vendors in the public market.
- **Jobs** - a task or work that others paid for.
- **Opportunities** - chances that come in life.
- **Community** - the place where a group of people live.
- **Landlords** - the owner of the property.
- **Renovate** - changes in a building or repairing in a particular location.

- **Profit** - additional income that comes in your sales.
- **Competitor** - other business that sells the same goods to the consumer.
- **Product** - existing goods in the market

SIGNIFICANCE OF THE STUDY

To The Tenants: This study can help the tenants to better understand the advantages and disadvantages of expanding the public market.

To The Landlord: This study can help the landlord to understand the situation of the tenants.

To the community. This study can help the community to know the effect of expansion of a public market and therefore have the idea on how to interact and help motivate the tenants of this community that will have a big role in the near future.

To the Future Researchers: This study can give future researchers authentic and reliable information that can help them should they make a research study related to this.

To the Buyers and Sellers: This study would also inform us of the advantages of relocating their existing public market.

To the Local Government Unit (LGU): This study is a reference in building the actual public market and supporting facilities. It will give them a new iconic structure in their place because of its architecturally appealing design. This will be their new milestone that will reflect how progressive their city is.

CHAPTER 2

REVIEW OF RELATED LITERATURE AND STUDIES

According to Mogan et.al, 2007 Public Market is a space that annually draws more people than any of the city's major sporting and cultural events. This is one of the places that promotes tourism in a city. Tourists mostly go to places where it is relaxing and places where there is a healthy environment. Public markets were the first place that were built to shop and buy the daily needs of people in the past years, where there was not that much competition for other buildings like malls and other commercial buildings until these buildings were suddenly erected which made the market look like a low-class shopping place.

According to Nedic, 2012 Philippine Public markets are often described to be messy, unorganized, and have a dingy environment ventilated with foul odor. These deteriorating conditions and lack of supporting facilities lead to sudden decrease in patronage coming to the public markets and these situations lead to the construction of modernized supermarkets and hypermarkets which are fully air conditioned that promotes convenience shopping that leads to its rapid popularity.

According to Golosino (2012), Vendors congregating on the sidewalks were notoriously known as eyesores and obstructions. In the words of Senator Santiago quoting Mayor Peñalosa she said "a good city is one with great sidewalks". In the Philippines, especially in the urban areas, sidewalks lost their essence from the perspective of the pedestrian. It was supposedly an access point for those who want to catch time and would like to avoid traffic by means of walking. Instead, sidewalks were transformed into a pseudo marketplace. As recourse, pedestrians resort to walking on the road exposing them to greater risk and add to the congestion

According to Dela Cruz, 2014 A Public Market is a year-round, carefully crafted, intentional and diverse medley of owner-operated shops, stalls and/or day tables. Public Market exists to fulfill a public purpose, showcase a community's unique character and culture while serving its everyday shopping needs. They typically focus on the sale of a full array of fresh, healthful, value added, and prepared foods often locally owned and operated which highlight the best of local foods, crafts, music, heritage and culture.

According to Dick, 2014 A Redevelopment of Public Market in San Pablo, Laguna to Transform the Market for Sustainable Design Sustainable design or building "green" is an opportunity to use our resources efficiently while creating healthier buildings.

According to Sarzaba et.al (2018) As stated in the National Market Code of the Philippines, Public Markets are referred to as the vital economic enterprises and public utilities, which contribute significantly to the income and general welfare of cities and municipalities. They provide increased livelihood opportunities and marketing services and are usually standard barometers for the level of development of local governments. However, most of the public markets in the country are in a state of disrepair thus hampering their potential as hubs for efficient domestic retail trade. Certain major problems existing in the majority of our public markets covering important aspects of market operations such as location, construction, sanitation, security/safety, market fee collection, and award and occupancy of stalls result in the gradual but progressive deterioration of the markets. That is why, this project focuses on rehabilitating the existing public market in my chosen site which is Brgy. Pampang, Angeles City, to boost its role as a center of trade in the city. Angeles City is considered to be one of the most economically advanced localities in the region. Public markets here are the center of trade for fresh farm products, while stores selling all sorts of merchandise also abound in the city. The city could further boost this role by improving the whole market complex and adding spaces that will make people attend to and at the same showcasing small scale business. The proposed project is to rehabilitate and reinvent the public market complex through proposing a new approach towards public market development, giving the local traders a level playing field with the advent of malls and other big shopping centers. Another one is through reinventing and expanding the market complex, rehabilitating the market that will reflect the rich culture of Angeles City. Lastly, is by improving its market and access to its commercial and trading area, to stimulate more buying and selling of products.

According to Leung et. al (2019) Public market's redevelopment can incorporate food waste management, as a response to the persisting food loss at the retail-consumer level of our value supply chain. Tagaytay City Public Market was chosen as the site of research because of its namesake's strong market culture, environmental agenda, and need for alternative and accessible waste treatment methods. With goals of redeveloping the public market, diverting food waste and creating an enclosed food waste management loop, a regenerative approach was applied. Anaerobic digesters, a regenerative form of waste treatment technology, was integrated in the redevelopment, since it transforms organic waste into profitable products in a compacted system that is simple to operate. As for the architecture, the market's redevelopment was coined as a regeneration, where viable components of the old market were used in creating a new market that enjoins people to act on food waste issues. This inadvertently attempts to reduce construction waste, paralleling the diversion of food waste. Additions to the typical market programming consists of spaces that serve as contact points to the waste management facilities, whether it be through environmental reward or as an outlet for the products of the digester. Overall, the layouts of the spaces take advantage of Tagaytay's naturally cool climate in order to create a comfortable environment, not only for the benefit of the human users but for the preservation of the perishable goods of the market as well, given the limitations of its typology. In conclusion, responsible food waste management was defined as recognizing food waste as an economic loss, as a social responsibility and as a form of resources that can be used to create something new. Applying this mindset to the redevelopment of a public market utilizes the traditional role of the market as a central node in a community, in bringing people closer to waste management issues, enjoining people to become aware and do their part.

According to Padillo, 2022 Public markets are significantly vital to the Filipino's social and public space life. It is a trade center where Filipinos market and sell products and has been for different eras. Palengke, or public Market, is a significant avenue for empowering the agricultural sector, farmers, consumers, vendors, and the community. The majority of public markets are said to have negative

comments from users, such as "unsanitary, stinky, messy, crowded and lacking in natural lighting," affecting the vitality of the place. Bayombong, a first-class municipality in Nueva Vizcaya, has an underutilized public market. It is a growing community that continuously works to gain economic standing by uplifting local shops. As recognized and identified, the public market is a hub for most local entrepreneurs; thus, revitalization will be a substantial benefit for the majority's development standpoint, which would then adhere to the public's ambition. Apart from being a catalyst for community improvement, the modernization into a complex will mean a significant transformation for many public markets in the Country. The Bayombong Public Market Complex will achieve its goal with the assistance of the Bayombong Local Government and its branch office Industrial Office. This research aims to create a new design for the Bayombong Public Market with the synthesis of the Social Architecture approach and its supporting facilities in their new location by assessing the existing condition of the site and gathering data through various case studies and surveys. The design will focus on resolving problems in the current market. By enforcing the laws that govern this government facility, the proposed plan must improve circulation and provide greater comfort to the user.

CHAPTER 3

RESEARCH METHODOLOGY

This chapter presents the methodology used for collecting the data for the study. It explains the study population, sample and data collection techniques, administration of the survey instrument, and data analysis & also gives details about the population and sampling techniques used for the research.

RESEARCH METHOD USED

In this research, survey was used because it involves respondents and questionnaires to provide quantitative answers to the problems and also the possible effects of expansion of the public market by gathering the necessary information to the tenants. A survey consists of a predetermined set of questions that is given to a sample.

According to Nassaji (2015), the use of quantitative research is to achieve the goal of classifying the scientific methodology that will be observed by the sample population of the natural surroundings. The data will be collected and analyzed using quantitative procedures to explore the possible effects of expanding the Public Market to the Tenants in Peñaranda with adequate and accurate interpretation of the data that will be collected.

The descriptive research method is the most appropriate because the study focuses on the potential repercussions and risks linked to the possible effects of expanding a public market. The researcher employed this type of research methodology to gather first-hand information from respondents utilizing survey questionnaires .

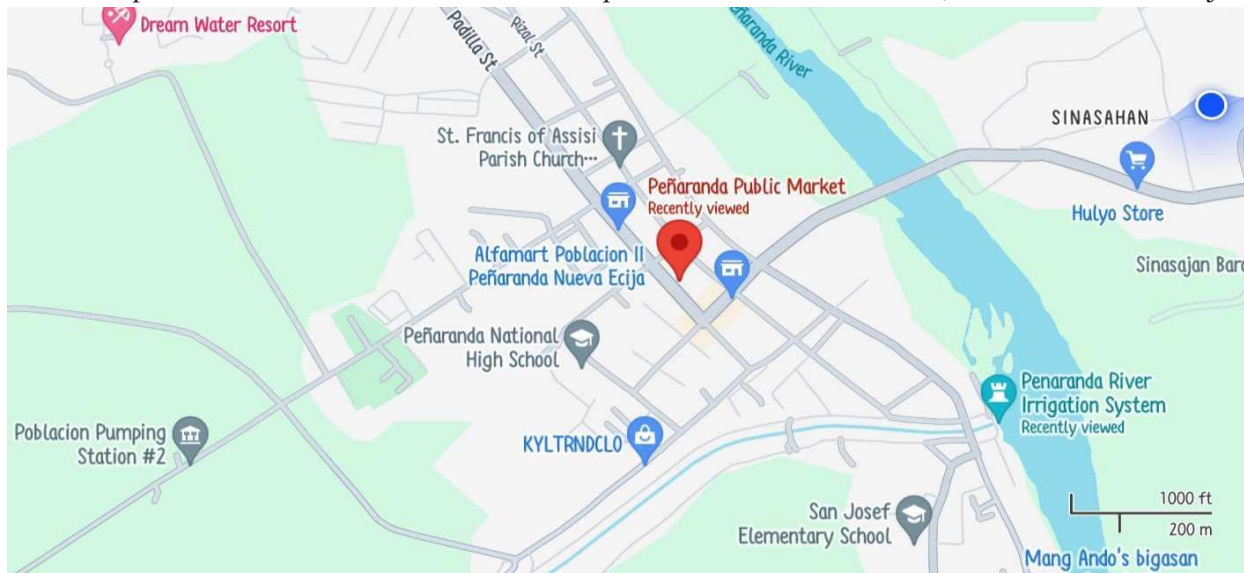

In accordance with this, these questions will administer to the tenants to know their judgement regarding to the expanding of public market compromise their understanding

RESEARCH LOCALE

The Municipality of Peñaranda's chosen areas were the site of the study. More specifically, in the Poblacion 1 Peñaranda Nueva Ecija , where the public market and also the tenants were located. This location was chosen to learn about the possible effects of expanding a public market in Peñaranda, Nueva Ecija.

Only Peñaranda's tenants in the public market will be the subject of the study; no other provinces or regions will be included.

The map below shows the exact location of the public market in Poblacion 1, Penaranda Nueva Ecija.

RESPONDENTS OF THE STUDY

The study's respondents are people in the Peñaranda, Nueva Ecija community. The information will be primarily gathered from the Tenants to their product line. All of these participants were selected through random sampling. This sampling method is conducted where all the tenants of the population can become part of the sample. The chosen respondents contain one hundred (100) respondents from Poblacion 1 Peñaranda, Nueva Ecija. The researchers chose these Tenants in the public market because they are applicable to the study.

GENDER	COUNT	PERCENTAGE
Male	34	34%
Female	66	66%
TOTAL	100	100%

PRODUCT LINE	COUNT	PERCENTAGE
Fish Section	18	18%
Meat Section	20	20%
Dried Fish Section	12	12%
Grocery Section	2	2%
Rice/ Grain Section	4	4%
Fruits and Vegetable	26	26%
Eater Section	2	2%
Others	16	16%
TOTAL	100	100%

INSTRUMENT USED

In this study, the researchers used a survey questionnaire to collect information about the possible effects of expanding the public market in Peñaranda, Nueva Ecija.

The questionnaires will be distributed to the tenants of this study's primary data collection tool. The survey questionnaire will have three sections: Demographics, Analysis, Challenges. The survey questionnaire will use a Likert Scale to measure how much the respondents agree or disagree with the provided statement questions, Proposed solutions or interventions to mitigate the possible effects of expanding the public market .

The survey questionnaire aims to collect detailed and pertinent data regarding the possible effects of expanding the public market to the tenants in Peñaranda, Nueva Ecija. The results can be used to guide measures and policies targeted at reducing the detrimental possible effects to the tenants of expanding public markets in Peñaranda Nueva Ecija.

VALIDITY OF THE INSTRUMENT

The researcher will utilize the content validity type to ensure the validity of the study's instruments. This means that each data will accurately reflect the subjects, themes, and areas that the instrument is designed to assess. Documentary analysis is one of the tasks that the researcher must undertake in accordance with the content validity and assessing the potential consequences of extending a public market on the tenants.

DATA GATHERING PROCEDURES

The questionnaire will take much of the researcher's time to construct to benefit the intended respondents. As soon as this starts, these questions will be disseminated via printed survey forms, along with proof that the survey was done. The outcome will be totaled and tabulated by the straightforward responses from the tenants of public market the study's respondents. The data gathering will be truthfully collected and interpreted by the researchers to get an accurate result.

STATISTICAL TREATMENT OF DATA

Based on the research survey the instrument created by the researcher, the data to be gathered for the study will be arranged and classified. One piece of application software (Microsoft Office Excel) will be used. Also, all data will be coded, totaled, and tabulated using the following statistical tools to make it easier to present and comprehend results.

FREQUENCY AND PERCENTAGE

The characteristics of the individual profile of the Peñaranda Nueva Ecija using frequency and percentage, of the tenants in the public market in Peñaranda Nueva Ecija . Along with providing the number of observations for a certain survey question, the statistical tools will also show how respondents answered that particular question.

The formula that will be used in the application of this technique is:

$$\% = (f/n) \times 100$$

where:

% = percentage

f = frequency

n = number of cases or total sample

RANKING

This statistical technique is a descriptive one. Describe numerical data in addition to percentages. The study will use comparison statistics to demonstrate the importance of each issue under consideration.

WEIGHTED MEAN

The researchers will also use the weighted mean as a statistical technique to determine a specific conclusion from the data being acquired. The application will be used to calculate the average responses provided by the survey's chosen respondents, which are the tenants of Peñaranda, Nueva Ecija. The following is the formula for the weighted mean :

$$\bar{x} = \frac{\sum fx}{n}$$

where:

$\bar{x}$ = weighted mean

$\sum fx$ = the sum of all the products of f and x, f being the frequency of each weight and x as the weight of each operation

n = total number of the respondents

PEARSON R

Given that the study's goal is to demonstrate a significant relationship between variables, the researcher will employ Pearson's correlation coefficient, or Pearson R . This statistical tool is often used to assess the strength and direction of linear associations between two variables. The following formula is used to calculate Pearson's R :

$$r = \frac{N\sum XY - (\sum X)(\sum Y)}{\sqrt{[N\sum x^2 - (\sum x)^2][N\sum y^2 - (\sum y)^2]}}$$

$$[N\sum x^2 - (\sum x)^2][N\sum y^2 - (\sum y)^2]$$

Where,

N = the number of pairs of scores

$\sum xy$ = the sum of the products of paired scores

$\sum x$ = the sum of x scores

$\sum y$ = the sum of y scores

$\sum x^2$ = the sum of squared x scores

$\sum y^2$ = the sum of squared y scores

LIKERT SCALE

The Likert scale technique of summed ratings will be used in this study to assign responses to units of measurement. Each response will be assigned a single scale value when using this scaling approach.

Each category will be given a numerical value (e.g., Strongly Agree, which is equivalent to 4, and Strongly Disagree, which is equal to 1) in order to assess answers using the Likert Scale.

One of the methods covered above, the weighted mean, will be applied to ascertain the provided values. Every scoring system for every item must be consistent with the level of response from the Tenants in the public market. The scaling will be done using the following:

WEIGHTED MEAN

SCALE

VERBAL INTERPRETATION

4.00 - 3.50	4	Strongly Agree (SA)
3.49 - 2.50	3	Agree (A
2.49 - 1.50	2	Disagree (D)
1.49 - 1.00	1	Strongly Disagree (SD)

CHAPTER 4

PRESENTATION, ANALYSIS, AND INTERPRETATION OF DATA

The Presentation, analysis, and interpretation are given in this chapter. Data for the study came from the answers to questionnaires that were handed out in the field. In accordance with the questions in the problem description, the data was shown in the table.

1. PROFILE OF THE RESPONDENTS

The respondent's Age, Gender, Status, Income, Religion, Academic achievements, Product line and Year of tenancy were all gathered and analyzed in order to get full information about them.

TABLE 1
AGE OF RESPONDENTS

AGE	NO. OF RESPONDENTS	PERCENTAGE	RANK
18-24 years old	0	0%	1
25-34 years old	15	15%	2
35-44 years old	35	35%	5
45-54 years old	31	31%	4
55 above	19	19%	3
TOTAL :	100	100%	

Table 1 shows that, the no. of respondents , were 35% were the ages of 35-44, and 31% were the ages of 45-54 and 19%were over the age of 55 and 15% of age 25-34 and 0% to the age 18-24. As a result, the majority of respondents in this study were ages of 35-44 when responding in the questionnaire.

TABLE 2
GENDER OF THE RESPONDENTS

GENDER	NO. OF RESPONDENTS	PERCENTAGE	RANK
Male	33	33%	1
Female	67	67%	2
TOTAL :	100	100%	

The percentage and total number of male and female respondents are displayed in Table 2 for a total of 100 responses, there are 33 men and 67 women. The majority of respondents appear to be female, as indicated by the table, with 67% of responding being female and 33% male.

TABLE 3
STATUS OF THE RESPONDENTS

STATUS	NO. OF RESPONDENTS	PERCENTAGE	RANK
Single	20	20%	1
Married	80	80%	2
TOTAL :	100	100%	

Table 3 shows the status of the respondents 20% single and 80% married. This table implies that the majority of the respondents are married.

TABLE 4
INCOME OF THE RESPONDENTS

INCOME	NO. OF RESPONDENTS	PERCENTAGE	RANK
5,000-10,000	37	37%	3

10,000-20,000	55	55%	4
30,000-40,000	8	8%	2
50,000-60,000	0	0%	1
TOTAL :	100	100%	

Table 4 shows the income of the respondents ,55% of the respondents has 10,000-20,000 income, 37% of the respondents has 5,000-10,000 income and 8 of the respondents has 30,000-40,000 income.

TABLE 5
RELIGION OF THE RESPONDENTS

RELIGION	NO. OF RESPONDENTS	PERCENTAGE	RANK
Catholic	78	78%	3
Iglesia ni cristo	21	21%	2
Others	1	1%	1
TOTAL :	100	100%	

Table 5 displays the individual religions, 78% of the respondents were catholic, 21% were members of the Iglesia ni cristo, and 1 % were others.the total of 100 respondents.

TABLE 6
EDUCATIONAL LEVEL OF THE RESPONDENTS

EDUCATIONAL LEVEL	NO. OF RESPONDENTS	PERCENTAGE	RANK
Elementary graduate	18	18%	3
Highschool graduate	72	72%	4
College graduate	7	7%	2
Others	3	3%	1

CHAPTER 5

EXECUTIVE SUMMARY, CONCLUSION & RECOMMENDATIONS

INTRODUCTION

This chapter presents an overview of the major findings and recommendation that the researchers came after gathering, analyzing, and interpreting all data. This research focused on finding the Possible Effects of Expanding a Public Market on the Tenants in Penaranda Nueva Ecija.

The weighted mean and Pearson R were used for the statistical treatment of data.

EXECUTIVE SUMMARY

The study of “The Possible Effects Of Expanding A Public Market On The Tenants In Penaranda Nueva Ecija” aims to know the possible effects of expanding of public market in the community of Penaranda. Its goal is to identify the effects of expanding a public market to the tenants in Penaranda, Nueva Ecija. This study intends to know the effects of expanding a public market to the tenants and to determine the impact of renovation to the inflation of rent in Penaranda, Nueva Ecija.

Public markets are significantly vital to the Filipino's social and public space life. It is a trade center where Filipinos market and sell products and has been for different eras. Palengke, or public Market, is a significant avenue for empowering the agricultural sector, farmers, consumers, vendors, and the community. It is a growing community that continuously works to gain economic standing by uplifting local shops.

In this research, survey was used because it involves respondents and questionnaires to provide quantitative answers to the problems and also the possible effects of expansion of the public market by gathering the necessary information to the tenants. A survey consists of a predetermined set of questions

that is given to a sample. The use of quantitative research is to achieve the goal of classifying the scientific methodology that will be observed by the sample population of the natural surroundings. The data will be collected and analyzed using quantitative procedures to explore the possible effects of expanding the Public Market to the Tenants in Peñaranda with adequate and accurate interpretation of the data that will be collected.

The study's respondents are people in the Peñaranda, Nueva Ecija community. The information will be primarily gathered from the Tenants to their product line. All of these participants were selected through random sampling. This sampling method is conducted where all the tenants of the population can become part of the sample. The chosen respondents contain one hundred (100) respondents from Poblacion 1 Peñaranda, Nueva Ecija. The researchers chose these Tenants in the public market because they are applicable to the study.

Based on the research survey the instrument created by the researcher, the data to be gathered for the study will be arranged and classified. One piece of application software (Microsoft Office Excel) will be used. Also, all data will be coded, totaled, and tabulated using the following statistical tools to make it easier to present and comprehend results.

The characteristics of the individual profile of the Peñaranda Nueva Ecija using frequency and percentage, of the tenants in the public market in Peñaranda Nueva Ecija. Along with providing the number of observations for a certain survey question, the statistical tools will also show how respondents answered that particular question.

CONCLUSION

The study's results are based on the following findings.

1. How many vendors regularly operate in the market of Penaranda Nueva Ecija?

- Based on the information that gathered by the researchers the vendors that regularly operate in the market are most of the old tenants .

2.What are the market's current operating hours and days?

- The researcher finds that the current operating hours are in the morning at 4am - 12pm on the days of Wednesday and Saturday, and it depends on the several vendors if they operate on Monday.

3.What are the strengths and weaknesses of the current market?

- The researcher finds that the current market strength is where the market improved and expanded the location of their stalls with attractive design and their weakness are they are having difficulties due to the new competitors and the increasing rental fees.

4.How would it benefit the community of the expanded market?

- The researcher finds that the expansion of the market will give the community a good image and give more opportunities to the tenants to have more product offerings.

5.What are the challenges you faced as a vendor/ customer in the current market?

- The researcher finds that the challenges that are faced by the vendors are the new competitors and it is difficult for them to have more loyal customers and for the challenges that are faced by the customers it is not easy for them to find the new location of the vendors they usually buy from.

6. What kind of products or services are currently offered in the market?

- Based on the information that the researcher provided through a survey questionnaire, most of the respondents offered fruits/ vegetables and meat in the current market.

HYPOTHESIS (Null Hypo): Ho1. There is no significant relationship of expanding the public market to the tenants in Penaranda Nueva Ecija.

Based to the data gathered by the researchers, use the null hypothesis because there is no significant relationship between the expansion of the public market and the tenants.

HYPOTHESIS (Alternative Hypo): Ho2. There is a significant relationship of expanding the public market to the tenants in Penaranda Nueva Ecija.

The researchers found out that alternative hypothesis are rejected in this study based on the information that gathered the respondents.

RECOMMENDATIONS

After finding out that there is no relationship between the expansion of the public market and the tenants, the researchers of this study came up with these recommendations.

1. **To the tenants** who are renting they should always find a way to pay the rent, in that way they can stay and still operate their business in their stall.
2. **To the community** they need to maintain a good image and have a positive relationship with the people in Penaranda Nueva Ecija.
3. **To the buyers** they should support the local farmers in buying their products.
4. **To the LGU** they still need to create projects in the town that will help the farmers and to give the community a good image and more opportunities.

5. **To the future researchers** you should have the data and analyze to get the fact information about the study to get a more accurate result.

PART II ANALYSIS

1. As a tenant i appreciate the public market expansion
 (Bilang isang nangungupahan natutuwa ako sa
 pagpapalawak ng pamilihan)

2. The expansion of the public market gives a good image
 to the community (Ang pagpapalawak ng pamilihan ay
 nagbibigay ng magandang imahe sa komunidad)

3. The expansion of the public market will create new
 jobs and opportunities (Ang pagpapalawak ng pamilihan
 ay lilikha ng trabaho at oportunidad)

4.The design of the stall helps to attract buyers (Ang
 disenyo ng mga pwesto ay makakatulong upang makaakit
 ng mamimili)

STRONGLY AGREE 4	AGREE 3	STRONGLY DISAGREE 2	DISAGREE 1

5. I did a sale of goods to keep my business profitable (Binenta ko sa murang halaga ang mga produkto upang manatiling kumikita ang aking negosyo)

6. The expansion of the market will give existing tenants opportunities to expand their businesses (Ang pagpapalawak ng pamilihan ay maaaring maging daan upang lumawak ang negosyo ng mga nangungupahan)

7. The expansion of the public market helps local farmers and vendors (Ang pagpapalawak ng pamilihan ay nakakatulong sa mga lokal na magsasaka at nagtitinda)

8. I have online consumers since starting to renovate the market (Nagkaroon ako ng mga mamimili sa online mula ng ayusin ang pamilihan)

9. The expansion of public market provides an opportunity to expand my product offerings (Ang pagpapalawak ng pamilihan ay nagbibigay ng oportunidad na mas dumami ang inaalok na produkto)

10. Due to the expansion of public market the space and storage of the vendors has wider (Dahil sa pagpapalawak ng pamilihan mas lumawak ang espasyo at imbakan ng mga nagtitinda)

PART III. POSSIBLE CHALLENGES AND SOLUTIONS

1.The expansion of public market can increase rental costs (Ang pagpapalawak ng pamilihan ay maaaring tumaas ang bayad sa renta)

2. My consumers have difficulty locating my business since i moved (Mula ng lumipat ng pwesto ng aking negosyo nahirapan ang mga mamimili na mahanap ito)

STRONGLY AGREE 4	AGREE 3	STRONGLY DISAGREE 2	DISAGREE 1
------------------------	------------	---------------------------	---------------

3. The expansion of the public market causes temporary traffic to the area (Ang pagpapalawak ng pamilihan ay nagdulot ang pansamantalang trapiko)

4. Due to the inflation of rental costs as a tenant, i can maintained my product until my profit return (Dahil sa pagtaas ng bayad sa renta bilang nangungupahan kailangan panatilihin ang aking produkto hanggang sa bumalik ang kita ang aking negosyo)

5. Due to the expansion of the public market, competition from new vendors has increased (Dahil sa pagpapalawak ng pamilihan maaari tumaas ang bilang ng kakumpetensiya)

6. Due to market expansion it was also necessary to lessen employees (Dahil sa paglawak ng pamilihan kinailangan din na bawasan ang mga empleyado)

7. Due to renovation of public market existing stall may have to close temporarily (Dahil sa pagsasaayos ng pamilihan may mga pwesto na kinailangan mag sara pansamantala)

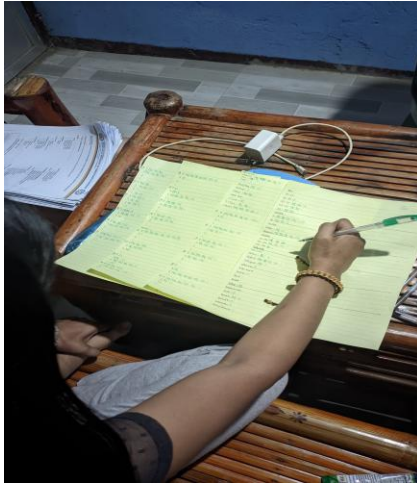

8. Due to the number of competitors, it is difficult to have loyal customers (Dahil sa dami ng kakompetensiya mahirap magkaroon ng suki)

9. Due to the availability of new stocks of the product, the price may shock customers (Dahil sa pagkakaroon ng mga bagong produkto maaaring mabigla sa presyo ang mga mamimili)

10. Due to the new competitor, other tenants who are expanding their business may take a big risks (Dahil sa pagkakaroon ng bagong kakompetensiya ang ibang nangungupahan ay maaaring magkaroon ng panganib sa negosyo)
